

## How to Apply

Step by Step Directions –

1. Place clean shoe on white contact paper
2. Trace around the shoe sole
3. Cut out traced shoe sole outline
4. Cut in half at the mid-foot (this will allow for better flexibility of the product)
5. Peel off white contact paper and apply product to the shoe sole

(Press firmly to secure sole saver in place, using a heat source will allow for a more flush application)

**HELPFUL TIP:** To prevent detachment, please ensure all air pockets are removed from the sole savers prior to wearing. Using a heat source is the best way to achieve this.
